GROGREEN CU-RE

Stronger and healthier crops
through targeted copper nutrition

GROGREEN Cu-re is a high-quality, liquid gel suspension fertilizer specifically formulated for foliar application, providing plants with essential copper to support healthy growth. In combination with amino acids for boosting plant vigour and growth, Cu-re will allow you to invest in robust plant growth, improved resilience and optimal harvests. This unique formula is 100% water-soluble, ensuring easy application and rapid absorption through leaves for immediate nutrient delivery.

THE ADVANTAGES

Enhanced plant performance

Copper supports enzyme functions, chlorophyll formation, and natural disease resistance, resulting in stronger, healthier crops.

Immediate action and availability

Foliar application enables rapid absorption, addressing copper deficiencies faster than soil-based treatments. Especially when supported by amino acids, functioning as a complexing agent that is easily absorbed and translocated in the plant.

Rapid systemic action

The product's rapid absorption and translocation distributes copper throughout the entire plant, reaching even new growth that emerges after application. This provides a thorough and fast-acting systemic strengthening effect, reinforcing the whole crop from within.

Versatile for all crops

Suitable for a vast and diverse range of crops, including fruits, vegetables, cereals, and ornamentals in both agriculture and specialised horticulture.

Reduced phytotoxicity

Copper can become toxic to plants at higher concentrations. Amino acids help regulate the release of copper ions into the crop, reducing the risk of toxicity.

Available in
5kg pot ~ 1kg pot ~ 200g pot

Application guidelines

Designed for foliar application. General dosage varies between 1 – 3 kg per hectare, depending on the crop type, timing and deficiency symptoms.

Dilution rate depends on the crop involved, but in general apply with a concentration that varies between 0,2 and 0,5%. Lower the dosage to 0,1% when applying on young and/or sensitive plants.

For crop specific recommendations, visit our website or contact your sales manager.

APPLICATION TIPS

Shake well before use. Apply during cooler parts of the day (early morning or late afternoon) to maximise absorption and minimise evaporation. Ensure thorough coverage of leaves, but avoid excessive run-off.

Always perform a compatibility test when mixing with other products. Do not mix with alkaline materials and phosphate-rich products.

Density: +/- 1,30 kg/l

Specifications	W/W	W/V
Total Nitrogen (N)	5,5%	7,15%
Organic Nitrogen (N), from amino acids	5,5%	7,15%
Sulphur Trioxide (SO ₃), soluble in water	8,2%	10,66%
Copper (Cu), complexed by amino acids, soluble in water	6,5%	8,45%
Organic matter	30%	39%
Organic Carbon (C)	17%	22,1%
Dry matter	46,2%	60%
