

SUPPLEMENTS

GROGREEN MAGIC

Ensuring optimal photosynthesis and plant vitality by the supply of magnesium.

GROGREEN Magic is a high-performance liquid fertilizer designed for the rapid correction of magnesium deficiencies in a wide range of crops. Its powerful formula delivers a concentrated dose of magnesium, the core of chlorophyll, to boost photosynthesis and restore vibrant plant health. To ensure maximum effectiveness, the formula is enriched with essential micronutrients (Fe, Mn, Zn) that are complexed by natural lignosulfonates, guaranteeing superior absorption and efficiency with every application.

THE ADVANTAGES

Enhanced photosynthesis

Directly stimulates the plant's photosynthetic engine by delivering essential magnesium. This results in increased energy production, leading to more vigorous growth and higher yield potential.

Improves fruit yield and quality

By maintaining overall tree health and ensuring consistent energy supply, Magic helps to reduce premature fruit drop and promote better size and weight. Ultimately leading to an increased yield of higher quality.

Superior Absorption

Maximises the effectiveness of each application by improving how nutrients stick to and penetrate the leaf. This ensures a more immediate impact from the nutrients applied.

Restores plant vitality

Actively prevents and corrects specific disorders like interveinal chlorosis, restoring the plant's healthy green color and returning it to its full productive capacity.

Optimizes metabolic function

Supports critical enzyme activities and metabolic pathways beyond photosynthesis, ensuring the plant can effectively use its energy for robust growth, stress resistance, and quality fruit development.

Available in
5kg pot ~ 1kg pot ~ 200g pot

5kg pot ~ 1kg pot ~ 200g pot

APPLICATION TIPS

Shake well before use. Apply during cooler parts of the day (early morning or late afternoon) to maximise absorption and minimise evaporation. Ensure thorough coverage of leaves, but avoid excessive runoff.

Always perform a compatibility test when mixing with other products. Do not mix with alkaline materials and phosphate-rich products.

GROGREEN products and
how we make a difference.

Application guidelines

Designed for foliar application. General dosage varies between 3 - 5 kg per hectare, depending on the crop type, timing and deficiency symptoms.

Never exceed a concentration of 0,5% (5 g/l).

For crop specific recommendations, visit our website or contact your sales manager.

Specifications	Density: +/- 1,35 kg/l	
	W/W	W/V
Total nitrogen (N)	7,30%	9,85%
Nitric nitrogen (N-NO ₃)	7,30%	9,85%
Magnesium Oxide (MgO), soluble in water	10,00%	13,50%
Iron (Fe), EDTA-chelated, soluble in water	0,050%	0,068%
Manganese (Mn), Lignosulfonate complex, soluble in water	0,027%	0,036%
Zinc (Zn), Lignosulfonate complex, soluble in water	0,010%	0,014%
